

NL230 SERIES

The NL230 series diode-pumped Q-switched lasers produce up to 150 mJ at 100 Hz or up to 190 mJ at 50 Hz pulse repetition rate. Diode pumping allows maintenance-free laser operation for an extended period of time (more than 3 years for an estimated eight working hours per day). The typical pump diode lifetime is more than 1 billion shots.

Lasers are designed to produce high-intensity, high-brightness pulses and are targeted for applications such as material ablation, remote sensing, OPO, Ti:Sapphire or dye laser pumping. Due to an electro-optical Q-switch, the master oscillator generates short duration pulses in the 3–7 ns range. The oscillator cavity optical design features a variable-reflectivity output coupler, giving a low-divergence laser beam.

A closed-loop TEC based chiller is used for laser cooling, eliminating the need for external cooling water and reducing running costs.

OEM version of NL230 series laser features compact design and stable output parameters

Angle-tuned non-linear crystals mounted in temperature stabilized heaters are used for optional second, third or fourth harmonic generation. The harmonics separation system is designed to ensure radiation with a high spectral purity and to direct it to the separate output ports.

For customer convenience the laser can be controlled via a user-friendly remote control pad or a USB interface. The remote pad allows easy control of all parameters and features a backlit display that is easy to read even through laser safety eyewear. Alternatively, the laser can be controlled from a personal computer via supplied Windows™ compatible software. LabVIEW™ drivers are also included with each laser installation package.

High Energy Q-switched DPSS Nd:YAG Lasers

FEATURES

- ▶ Diode-pumped, typical diode lifetime >1 Gshot
- ▶ Rugged sealed laser cavity
- ▶ Up to **190 mJ** at **1064 nm** pulse energy
- ▶ Up to **100 Hz** pulse repetition rate
- ▶ Short pulse duration in the **3–7 ns** range
- ▶ Variable reflectivity output coupler for low-divergence beam
- ▶ Quiet operation: no more flashlamp firing sound
- ▶ Air cooled
- ▶ Remote control via keypad and/or PC via USB (RS232 optional) port with supplied LabVIEW™ drivers
- ▶ Optional temperature-stabilized second, third and fourth harmonic generators
- ▶ Optional attenuators for fundamental or/and harmonics wavelengths

APPLICATIONS

- ▶ OPO, Ti:Sapphire and dye laser pumping
- ▶ TFT-LCD Repair
- ▶ Mass Spectroscopy
- ▶ Remote Sensing
- ▶ LIDAR (Light Detection And Ranging)
- ▶ LIF (Light Induced Fluorescence)
- ▶ PIV (Particle Image Velocimetry)
- ▶ LIBS (Light Induced Breakdown Spectroscopy)
- ▶ ESPI (Electronic Speckle Pattern Interferometry)
- ▶ Medical
- ▶ LIBS (Laser-induced Breakdown Spectroscopy)
- ▶ Photo acoustic imaging

¹⁾ Due to continuous improvement, all specifications are subject to change without notice. The parameters marked typical may vary with each unit we manufacture. Unless stated otherwise all specifications are measured at 1064 nm.
²⁾ Outputs are not simultaneous. Inquire for fourth 266 nm and fifth 213 nm harmonic specifications.
³⁾ With H300SH and H300S or H300SHC harmonics generator module. See harmonics generator selection guide for more detailed information.
⁴⁾ With H300STH and H300ST harmonics or H300SH and H300THC generator modules. See harmonics generator selection guide for more detailed information.
⁵⁾ Averaged from pulses, emitted during 30 sec time interval.

⁷⁾ FWHM.
⁸⁾ Near field (at the output aperture) TOP HAT fit is >80%.
⁹⁾ Full angle measured at the 1/e² level.
¹⁰⁾ Beam pointing stability is evaluated as movement of the beam centroid in the focal plane of a focusing element.
¹¹⁾ Beam diameter is measured at 1064 nm at the 1/e² level.
¹²⁾ With respect to SYNC OUT pulse.
¹³⁾ With respect to QSW IN pulse.
¹⁴⁾ Adequate room air conditioning should be provided.

Notes: The laser and auxiliary units must be settled in such a place void of dust and aerosols. It is advisable to operate the laser in air conditioned room, provided that the laser is placed at a distance from air conditioning outlets. The laser should be positioned on a solid worktable. Access from one side should be ensured. Intensive sources of vibration should be avoided near the laboratory (ex. railway station or similar).

CONFIGURATIONS

The following are suggested optimal configurations of H300 series modules for various output wavelengths:

1. For **2nd harmonics** output only: the H300SHC module.
2. For **2nd and 3rd harmonics**:
 - a) H300SH+H300S+H300THC – for SH and TH output.
 - b) H300STH+H300ST – a cost-effective solution not requiring the replacement of modules when changing from a 532 nm to 355 nm beam and vice versa. The 532 nm beam specification will, however, be 15% lower relative to the values specified above due to extra components in the beam path.
5. For **attenuators** for all wavelengths up to the 3th harmonic: H300A1+H300SH+H300A2+H300TH+H300A3 modules.
