

FemtoLux 3

FemtoLux 3 is a modern femtosecond fiber laser aimed for both R&D use and industrial integration. Tunable pulse duration in a range of 300 fs – 5 ps, adjustable pulse repetition rate up to 10 MHz and adjustable pulse energy up to 3 μJ allows optimization of laser parameters for the desired application. These include marking and volume structuring of transparent materials, photopolymerization, biological imaging, nonlinear microscopy and many others. To expand the scope of applications even further this laser can be equipped with a second harmonics module.

With burst mode enabled, FemtoLux 3 can generate bursts of pulses with energy above 10 μJ with instant burst shape control which can significantly improve the efficiency of some processes.

Having a rigid, compact, passive air-cooled laser head and the possibility to control the laser from a wireless tablet, FemtoLux 3 can be integrated with different equipment, be it laser equipment for material micro-processing, microscopy or any other research equipment.

¹⁾ Due to continuous improvement, all specifications are subject to change without notice. Parameters marked typical are not specifications. They are indications of typical performance and will vary with each unit we manufacture.

²⁾ See typical power and energy curves for other pulse repetition rates at Fig 1, Fig 2. and Fig 4.

³⁾ At 1 MHz PRR_L during 24 h of operation after warm-up under constant environmental conditions.

⁴⁾ At 1 MHz PRR_L under constant environmental conditions.

⁵⁾ When pulse picker is set to transmit every pulse.

⁶⁾ Pulse separation inside the burst is about 20 ns.

⁷⁾ Beam pointing stability is evaluated as a movement of the beam centroid in the focal plane of a focusing element.
