NT242 SERIES

NT242 series lasers produce pulses at an unprecedented 1 kHz pulse repetition rate, tunable over a broad spectral range. Integrated into a single compact housing, the diode pumped Q-switched Nd:YAG laser and OPO offers hands-free, no-gap tuning from 210 to 2600 nm. With its 1000 Hz repetition rate, the NT242 series laser establishes itself as a versatile tool for many laboratory applications, including laser induced fluorescence, flash photolysis, photobiology, metrology, remote sensing, etc.

NT242 series systems can be controlled from a remote control pad or a computer using supplied LabVIEW™ drivers. The control pad allows easy control of all parameters and features on a backlit display that is easy to read even with laser safety eyewear.

Thanks to a DPSS pump source, the laser requires little maintenance. It is equipped with air-cooled built-in chiller, which further reduces running costs. A built-in OPO pump energy monitor allows monitoring of pump laser performance without the use of external power meters. The optional feature provides a separate output port for the 1064, 532 or 355 nm beam.

FEATURES
- Integrates DPSS pump laser and OPO into a single housing
- Hands-free no-gap wavelength tuning from 210 to 2600 nm
- 1000 Hz pulse repetition rate
- More than 60 µJ output pulse energy in UV
- Less than 5 cm⁻¹ linewidth
- 3–6 ns pulse duration
- Remote control via key pad or PC
- Optional separate output for the OPO pump beam 355 nm, 532 nm or 1064 nm

APPLICATIONS
- Laser-induced fluorescence spectroscopy
- Pump-probe spectroscopy
- Non-linear spectroscopy
- Time-resolved spectroscopy
- Photobiology
- Remote sensing
- Determination of the telescope throughput

1) Due to continuous improvement, all specifications are subject to change. Parameters marked typical are illustrative; they are indications of typical performance and will vary with each unit we manufacture. Unless stated otherwise, all specifications are measured at 450 nm and for basic system without options.

2) See tuning curves for typical outputs at other wavelengths.

3) Measured at FWHM level with photodiode featuring 1 ns rise time and 300 MHz bandwidth oscilloscope.

4) Linewidth is < 8 cm⁻¹ for 210–405 nm range.

5) For manual input from PC. When wavelength is controlled from keypad, tuning resolution is 0.1 nm for signal, 1 nm for idler and 0.05 nm for SH and SF.

6) Beam diameter is measured at 450 nm at the 1/e² level and can vary depending on the pump pulse energy.

7) Separate output port for the 3rd and other harmonic is optional.

8) The pump laser pulse energy will be optimized for best OPO performance. The actual pump laser output can vary with each unit we manufacture.

**ORDERING INFORMATION**

**Note:** Laser must be connected to the mains electricity all the time. If there will be no mains electricity for longer than 1 hour then laser (system) needs warm up for a few hours before switching on.
