NT350 SERIES

**FEATURES**
- Hands-free, automated wavelength tuning from 330 to 2600 nm
- Up to 230 mJ in range
  - 660 – 2600 nm, 35 mJ in range
  - 330 – 660 nm
- Narrow linewidth across tuning range
- 3–5 ns pulse duration
- Remote control via key pad or PC
- Separate output port for 532 nm beam. Output for 1064 nm is optional
- OPO pump energy monitoring
- Hermetically sealed oscillator cavity protects non-linear crystals from dust and humidity

**APPLICATIONS**
- Photoacoustic imaging
- Flash photolysis
- Photobiology
- Remote sensing
- Non-linear spectroscopy

**APPLICATIONS**

**BENEFITS**
- High pulse energy (up to 230 mJ) is highly beneficial for photoacoustic imaging applications
- Superior tuning resolution (1 – 2 cm⁻¹) allows recording of high quality spectra
- High integration level saves valuable space in the laboratory
- Flashlamps replacement without misalignment of the laser cavity saves on maintenance costs
- In-house design and manufacturing of complete systems, including pump lasers, guarantees on-time warranty and post warranty services and spares supply
- Variety of control interfaces: USB, RS232, LAN and WLAN ensures easy control and integration with other equipment
- Attenuator and fiber bundle coupling options facilitate incorporation of NT350 systems into various experimental environments

**OPTIONS**
Optional items are available allowing optimization of the laser system for your application, for example:
- Fiber bundle coupled output in 350–2000 nm range;
- Efficient second harmonic generator for 330–660 nm range;
- Pulse energy attenuator;
- Water-air cooled power supply.
Please inquire custom-build versions and options.

NT352 series tunable laser seamlessly integrates in a compact housing a nanosecond optical parametric oscillator and Nd:YAG Q-switched laser.
Two models with different output pulse energy values are offered. The most powerful model has more than 230 mJ pulse energy at 700 nm. Narrow linewidth (<10 cm⁻¹) is nearly constant trough whole tuning range, which makes laser suitable for many spectroscopy application.

The device is controlled from the remote keypad or PC using LabVIEW™ drivers that are supplied with the system. The remote pad features a backlit display that is easy to read even while wearing laser safety glasses.
System is designed for easy and cost-effective maintenance.
Replacement of flashlamps can be done without misalignment of the laser cavity and deterioration of laser performance.
OPO pump energy monitoring system helps to increase lifetime of the optical components.

¹) Due to continuous improvement, all specifications are subject to change without notice. The parameters marked typical are not specifications. They are indications of typical performance and will vary with each unit we manufacture. Unless stated otherwise all specifications are measured at 700 nm and for basic system without options.

²) Measured at 700 nm for OPO and 350 nm for SH. See tuning curves for typical outputs at other wavelengths.

³) In signal and idler range.

⁴) When wavelength is controlled from PC. When wavelength is controlled from keypad, tuning resolution is 0.1 nm for signal, 1 nm for idler and 0.5 nm for SH.

**ORDERING INFORMATION**

**Note:** Laser must be connected to the mains electricity all the time. If there will be no mains electricity for longer than 1 hour then laser (system) needs warm up for a few hours before switching on.

**NT352C-10-SH-AW-H**

- **Model:**
- **Output pulse energy:**
  - C → 150 mJ
  - E → 250 mJ
- **Optional tuning range extension:**
  - SH → 330–660 nm
- **Pulse repetition rate, in Hz:**
- **Options:**
  - AW → water-air heat exchanger
  - H → 1064 nm output

**Note:** Laser must be connected to the mains electricity all the time. If there will be no mains electricity for longer than 1 hour then laser (system) needs warm up for a few hours before switching on.
